

Requirements Working Group

Emil White
ATLO QA Engineering Mgr Asc.

What about verification?

- **Too often requirements are developed with little regard for how they will be verified**
 - **Test plans are often an afterthought resulting in:**
 - **Realization that there is no available test setup and/or tool to support verification**
 - **High complexity or sensitivity of the test setup producing inconsistent results**
 - **Test Engineering, Quality Assurance and other stakeholders are often brought into the mix too late to help head off issues before they become escapes**
 - **Software requirements can't be developed in a vacuum.....**
