A University Perspective on Harmonization

What?

Working together in proper time and space and frequency.

Why?

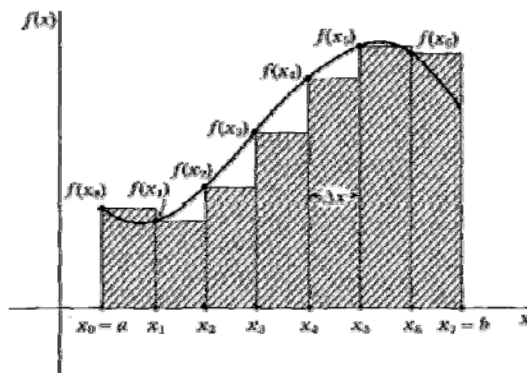

Integration is greater than the sum.

Challenges...

Towers and isolation.

Personal attachment to a technique.

Change is a fact.

Techniques

Inadvertently adapting agile design practices

Open source

Composable architectures (right size standards, don't over constrain)

Legacy—it's a fact.

Outdated systems in a matter of months.

Interoperation requires addressing legacy.

Flight vs Ground

Working to remove the distinction.

Same team doing the work.
