Some thoughts on ground services

- **Pride in being benchmark for high-quality, high-assurance while maintaining low-cost and quick turnaround**
  - **Deep understand of risks and mitigations**
  - **Smart tailoring of processes**
  - **Iterative development on proven technology**
- **Need to extend innovative solutions for AI&T to third parties**
  - **No need to test every antenna**
  - **Limit check in ground station i/f to data processing, not hw**
  - **Wise use of link budget includes options in antennas G/T**
- **Currently not limited by ground services**
  - **Need to work on scalability**
  - **Introduce space-to-space assets**
  - **Compatible with gov't assets (e.g. NEN, MC3) and commercial**
- **Company approach**
  - **Close partnership with one established provider**
  - **Dedicated expansion of our assets**
  - **Blurred line between space and ground services**
