

Mina Mitry

CEO And Co-Founder of Kepler Communications

Building The Internet For Space 

ON-ORBIT INTERNET WILL REVOLUTIONIZE SPACE

Just like the Internet on Earth fast-tracked technology and communications, Internet for space will advance defense and intelligence capabilities and drive the human reach further into space.

A photograph of four men standing at a trade show booth. The booth has a white backdrop with the 'The Hatchery' logo and text. The man on the far left is wearing a light purple shirt and glasses. The man next to him is wearing a grey blazer over a light purple shirt. The man in the center is wearing a dark blazer over a plaid shirt and is holding a small white electronic device. The man on the far right is wearing a dark blazer over a red and white checkered shirt and glasses. The background shows a window with blue curtains and a building outside.

Current Space Communications are Broken

CUSTOMERS CANNOT COMMUNICATE WITH EARTH

70% OF THE TIME

RESULTING IN MAJOR BOTTLENECKS, LIMITING MISSIONS

Existing communications infrastructure is limited by geographic and geopolitical barriers, making it impossible to provide 100% coverage.

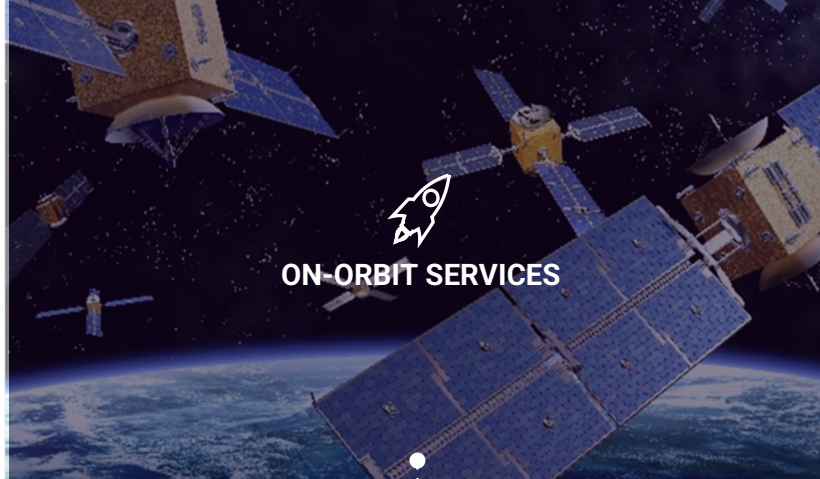

Modern missions require space communications to be as reliable as terrestrial communications: real time with high bandwidth and low latency.

EVERY SPACE MISSION NEEDS COMMUNICATIONS

... Leading To Unprecedented Demands In Space-Generated Data

ON-ORBIT SERVICES

DEFENSE & GOVERNMENT

EARTH OBSERVATION

REMOTE TERRESTIAL CONNECTIVITY

HUMAN SPACEFLIGHT

THE KEPLER NETWORK

Kepler is delivering data at lightspeed with an SDA-compatible optical data relay network connecting space and Earth communications with low latency, high throughput, and enhanced security.

Optical Communications Are Ready To Support The Future Space Economy

Technology Maturity

Standardization

Demand

Open Optical Ecosystem

2017
EDRS (GEO ↔ LEO)
>80k links acquired

2023
SDA PWSA (LEO)
60 T0 OCTs launched
575 T1 OCTs planned

Optical Communications Terminal
(OCT) Standard Version 3.1.0

Large Constellations
= Faster Revisit
= Lower Latency

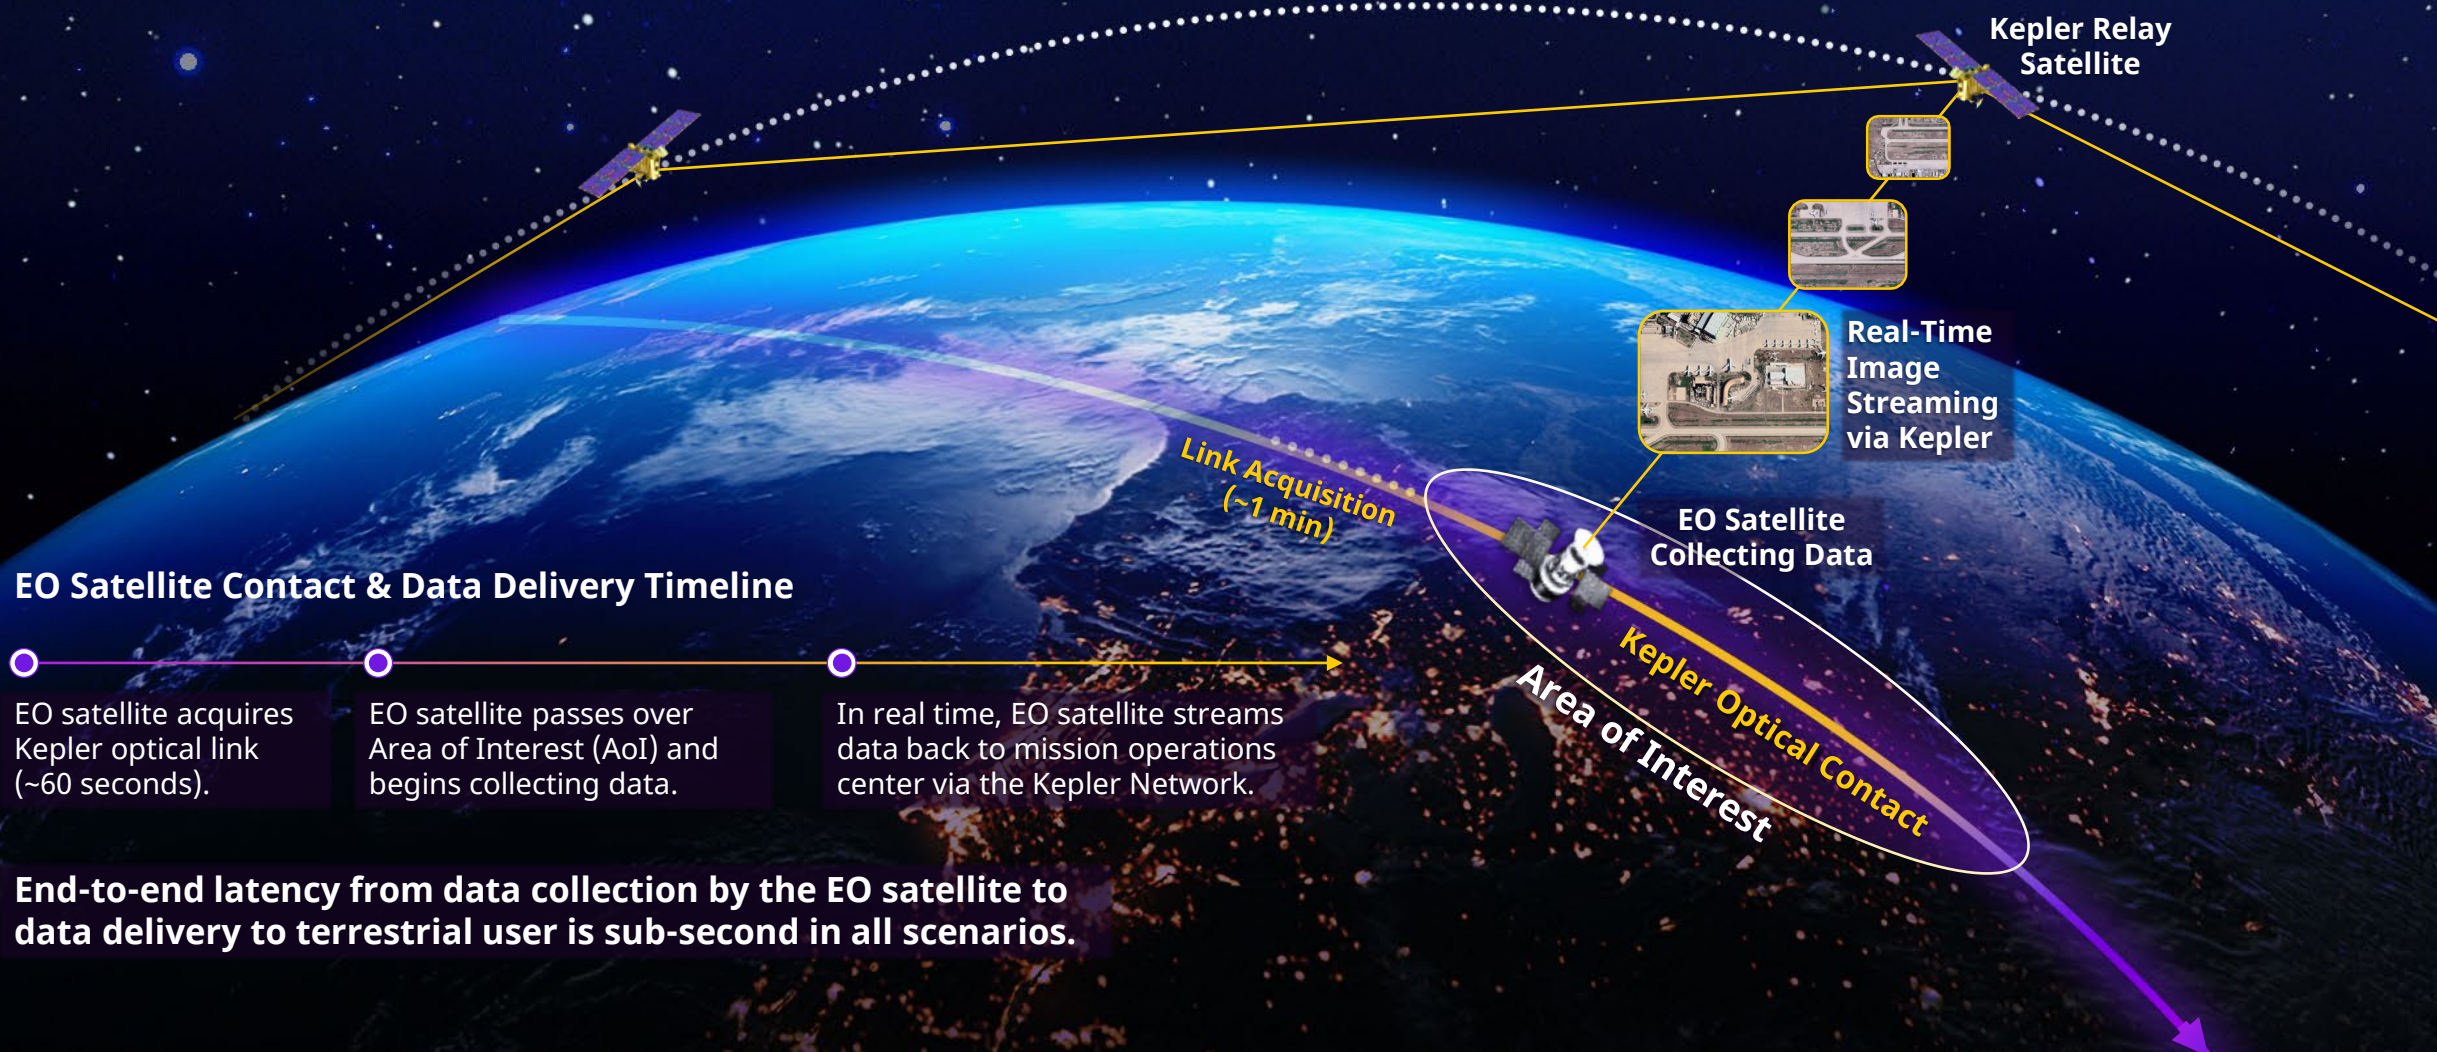

High-Performance Sensors
= Higher Bandwidth
= More Data Volume

Enhanced Security
= Reduced Jamming
= Eliminate Interception

Kepler Enables Real-Time EO Data Streaming, Sub-Second Delivery

Real-Time Data Streaming Over Area of Interest (AOI)

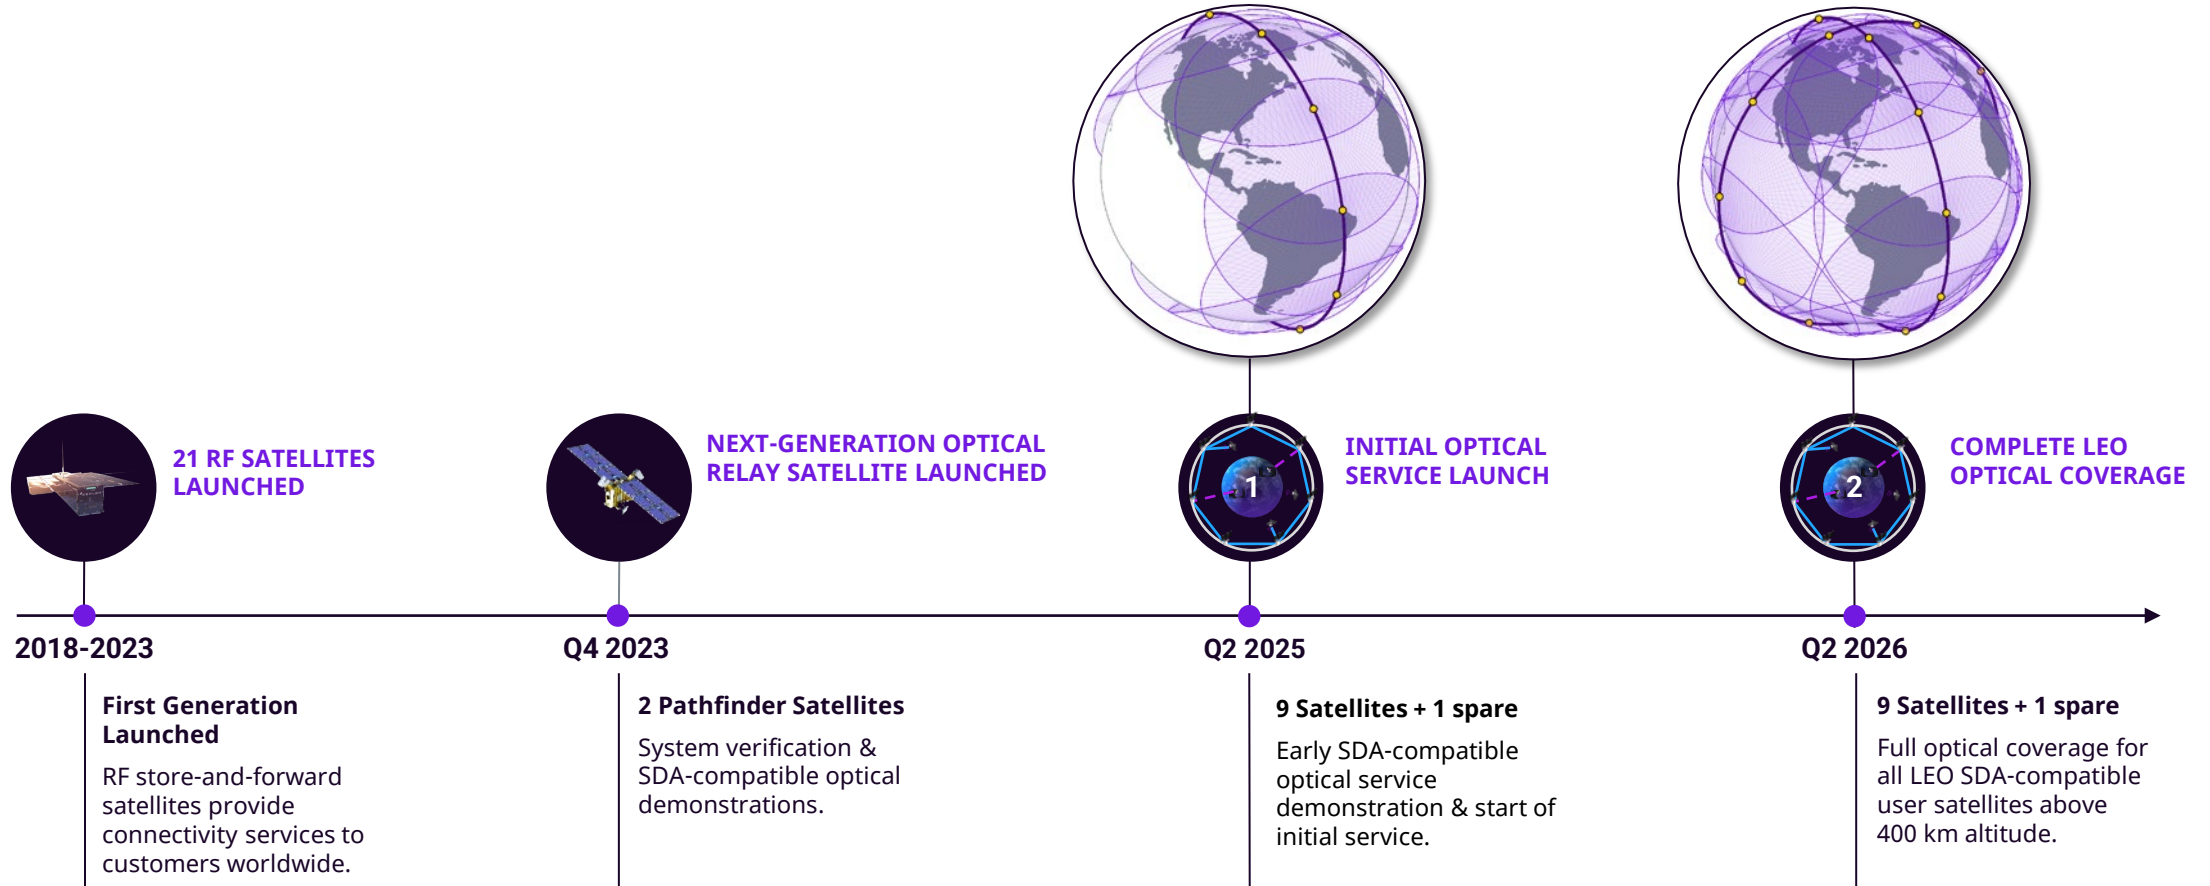

EO Satellite Contact & Data Delivery Timeline

- EO satellite acquires Kepler optical link (~60 seconds).
- EO satellite passes over Area of Interest (AoI) and begins collecting data.
- In real time, EO satellite streams data back to mission operations center via the Kepler Network.

End-to-end latency from data collection by the EO satellite to data delivery to terrestrial user is sub-second in all scenarios.

Kepler Service Deployment Timeline

Satellite Development Heritage

Kepler was founded on the premise of rapid cycles of learning including designing, developing, and delivering hardware on orbit.

Kepler Satellite Generation	Gen 1	Pathfinders	Tranche 1
Launch date	2018-2023	November 2023	Q1 2025
Service start	Current	Q3 2024	Q2 2025
Number of satellites	21	2	9 + spares
Satellite wet mass	~9 kg	~150 kg	~250 kg
Availability	15 passes / satellite / day	15 passes / satellite / day	Continuous (24/7)
End-to-end latency	~1 hr (store and forward)	~1 hr (store and forward)	Real time (≤ 500 ms)

Over 50 years of cumulative on-orbit heritage in Kepler spacecraft and systems

The Kepler logo features a stylized 3D cube icon to the left of the word "KEPLER" in a white, sans-serif font. The cube is composed of three visible faces in shades of blue and purple.

KEPLER

November 11, 2023 - Kepler Launched Two Optical Pathfinder Satellites Hosting The First Commercial, SDA-Compatible OCTs

Kepler Optical Pathfinder Satellites On Orbit

NORAD IDs: 58281 & 58299.
Altitude: 527 km
Sun-synchronous, 10:30 am LTDN.

Kepler's Pathfinder satellites host the first commercial, SDA-compatible OCTs ever launched

Kepler Tranche 1 Optical Space Data Relay Satellites

Kepler's data relay satellites enable optical communication between Kepler satellites and customer satellites using SDA-compatible optical communication terminals (OCTs)

10 Satellites Launching April 2025

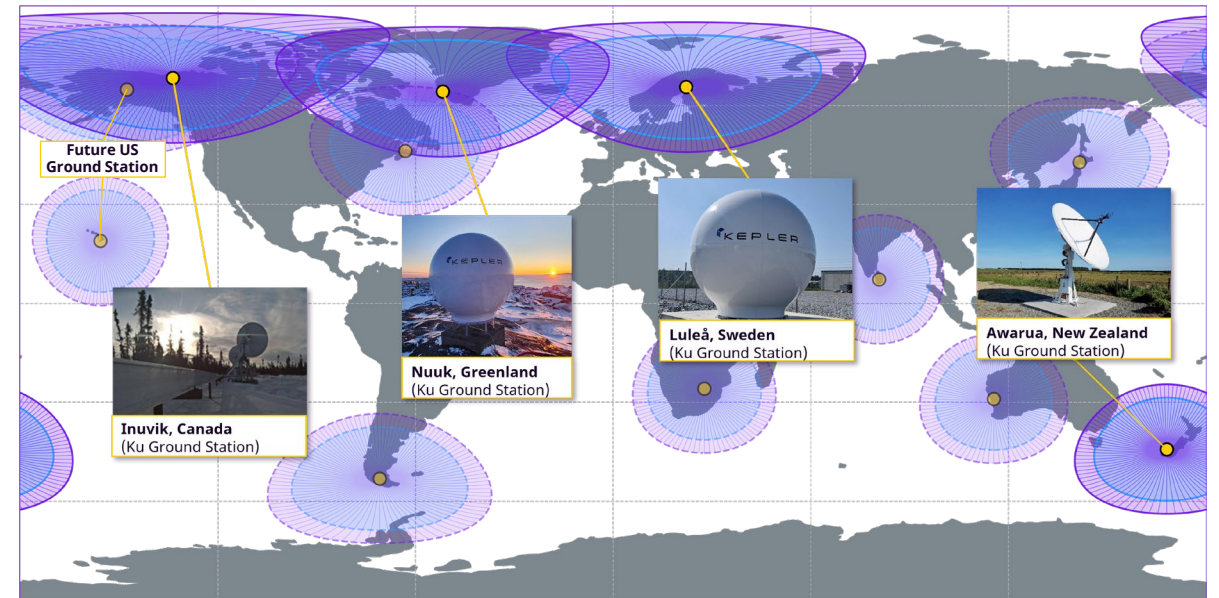

Kepler Tranche 1 Satellites	
Satellite Bus	<ul style="list-style-type: none">~250 kg wet mass.>5-year lifetime at 1,000 km altitude.1.2 kW deployable solar array.High pointing accuracy and stability (<750 μrad attitude knowledge error)Krypton/xenon thruster for orbit-raising and station-keeping.
SDA-Compatible OCTs	<ul style="list-style-type: none">4 \times 80 mm OCTs: 70 W / 15 kg.2.5 Gbps bidirectional.
Avionics	<ul style="list-style-type: none">FPGAs and GPUs for processing & edge computing (AI, ML, automatic target recognition, etc.).<ul style="list-style-type: none">4 \times GPU: 275 TOPS, 64 GB RAM.2 \times FPGA: 682K CLBs, 20 Gbps IO.>10 Gbps FPGA-based packet router.
Ku-Band Feeder Link	<ul style="list-style-type: none">2.5 Gbps downlink, 800 Mbps uplink.Gimbal/positioner with 2π sr field of regard.

Initial data relay constellation capacity is scalable and can be increased by deploying additional satellites.

Kepler Network | Space and Ground Segments

The Kepler Network's space segment consists of two planes of optically inter-linked data relay satellites in sun-synchronous orbits, providing 100% line-of-sight coverage to LEO orbits above 400 km. Kepler also owns and operates a global network of ground stations for connection to data relay satellites and direct RF connectivity services.

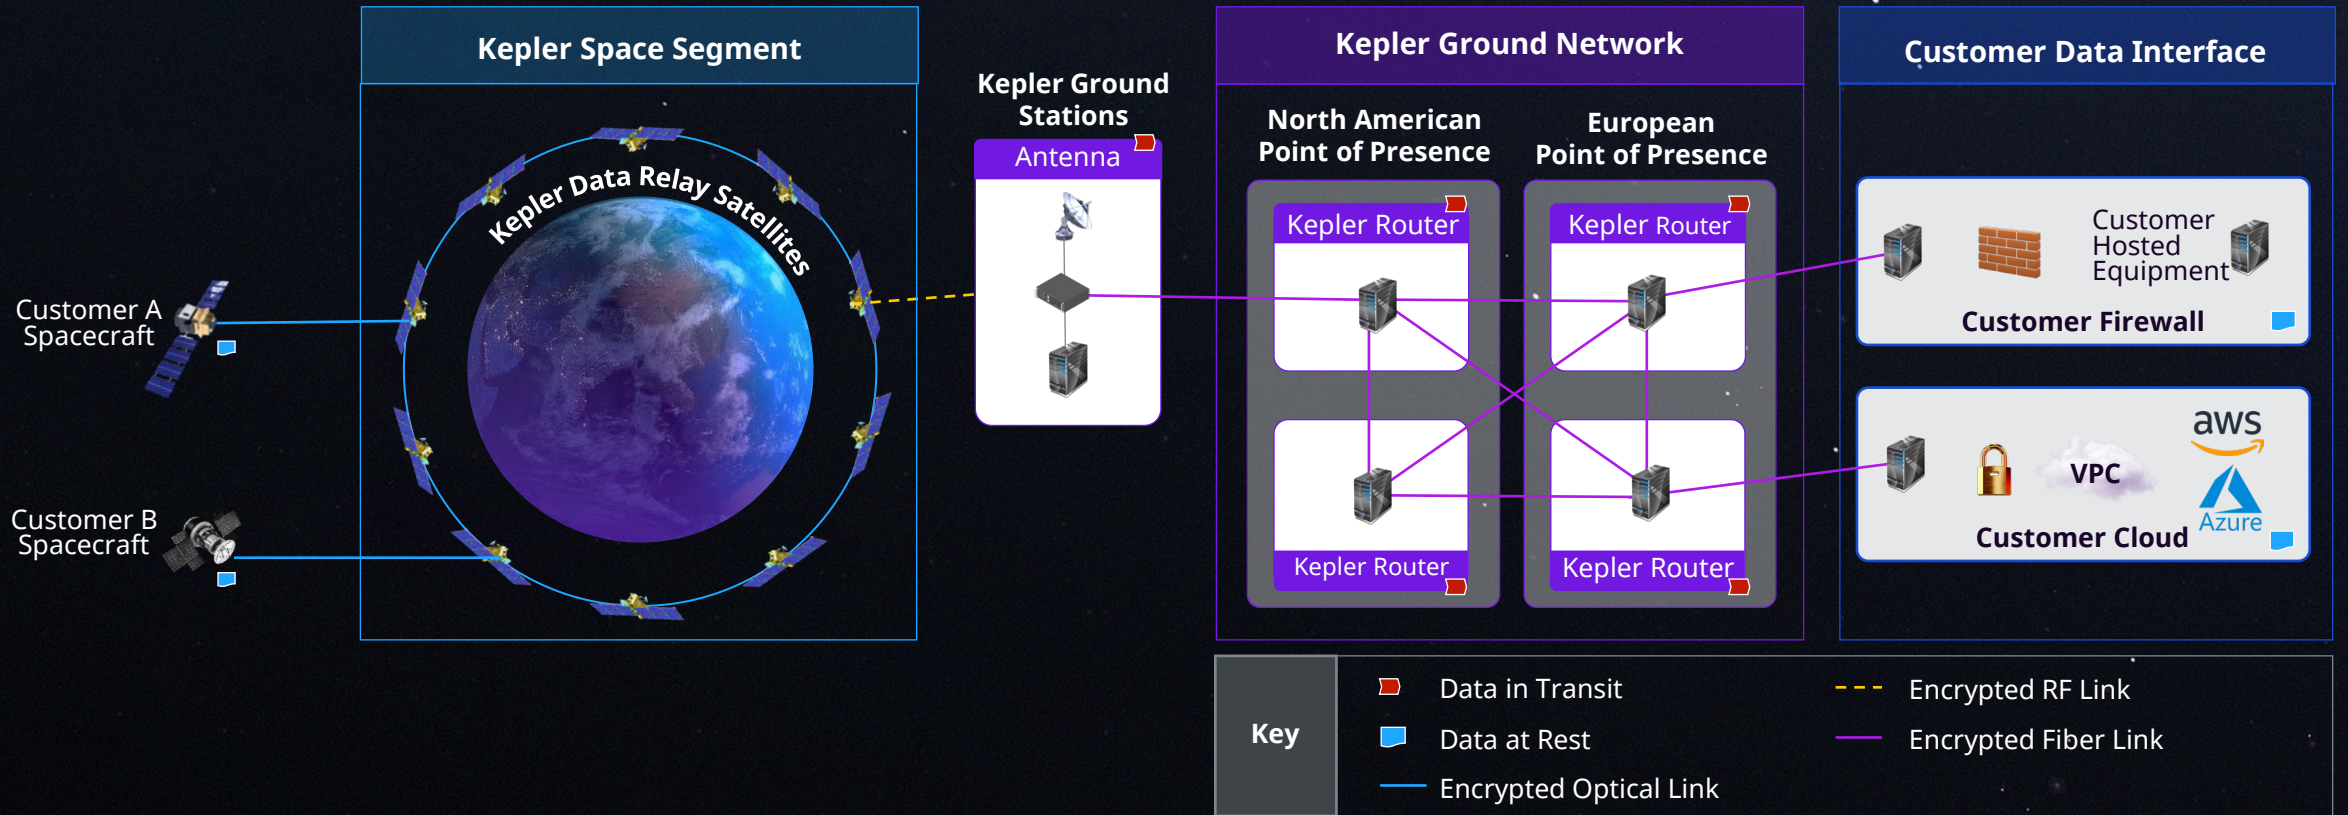

Coverage is shown at 400 km and 600 km altitudes, assuming a 5° minimum elevation angle in all directions from the gateway site.

Solid colors indicate operating stations. Dashed lines indicate planned stations

The Kepler Network provides persistent and resilient connectivity via multi-path routing and global coverage

Kepler Network | Routing and Security

- Standard IP Protocols
- Customer-Encrypted Data
- Compliant with NIST SP 800-171
- High Network Reliability
- Virtual or Hosted Customer Interface
- NIST SP 800-53 in Progress

Kepler's Open Space Internet Architecture

- Committed to Open, Non-Proprietary Standards
- Launched First Commercially Available SDA-Compatible OCTs
- Compatibility Across Networks
- Supporting Government and Commercial Users
- Resiliency for Government Programs
- End-to-End Connectivity
- Persistent Connectivity to LEO Assets

Why Are We Still Waiting For Data?

There Are No Speed Limits In Space
