KOMPSAT and COMS

Satellite System					
	KOMPSAT-1	KOMPSAT-2	COMS	KOMPSAT-3(A)	KOMPSAT-5
Launch	1999 - 2007	2006	2010	2012(2014)	2012
Orbit Altitude	685 km	685 km	35786 km	685 km	550 km
Orbit Type LTAN	Sun-Synchronous 10:50	Sun-Synchronous 10:50	GEO (128.2deg.E) N/A	Sun-Synchronous 13:30	Sun-Synchronous 06:00Dawn-Dusk
Mission	Observation Electro Optical	Observation Electro Optical	Communications Oceanography Meteorology	Observation Electro Optical (Infrared)	Observation SAR mission
Satellite Control Center					
Computer O/S DBMS/Middle ware	HP-9000/J210 HP-UX Oracle/Orbix	HP-C3600,C3750 HP-UX Oracle/Orbix	PC MS-Windows none/MS.NET	PC MS-Windows/Linux MS-SQL/MS.NET	PC MS-Windows/Linux MS-SQL/MS.NET

KOMPSAT-1 MCE and KOMPSAT-2 MCE

■ Four Subsystems in KOMPSAT-1 MCE and KOMPSAT-2 MCE

◆ Telemetry, Tracking and Command Subsystem (TTC)

- S-band uplink and downlink
- Tracking and ranging

◆ Satellite Operation Subsystem (SOS)

- Command processing
- Telemetry processing and analysis

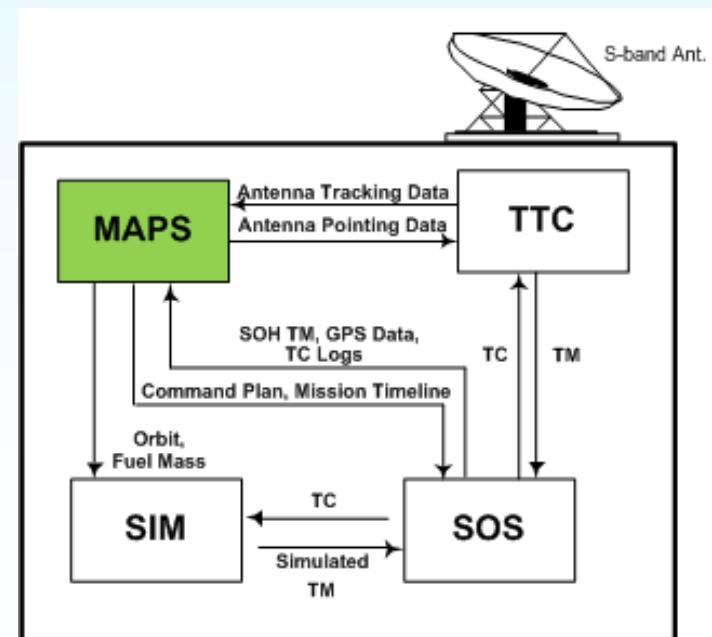

Integrated in one subsystem

◆ Mission Analysis and Planning Subsystem (MAPS)

- Mission planning
 - ❖ mission scheduling
 - ❖ command planning
- Mission analysis
 - ❖ orbit determination and prediction
 - ❖ event prediction

◆ Satellite Simulator Subsystem (SIM)

- Satellite simulation
- Operator training

KOMPSAT-3 MCE and KOMPSAT-5 MCE

■ Five Subsystems in KOMPSAT-3 MCE and KOMPSAT-5 MCE

◆ Telemetry, Tracking and Command Subsystem (TTC)

- S-band uplink and downlink
- Tracking and ranging

◆ Satellite Operation Subsystem (SOS)

- Command planning
- Command processing
- Telemetry Processing and Analysis

◆ Mission Planning Subsystem (MPS)

- Event prediction
- Mission scheduling

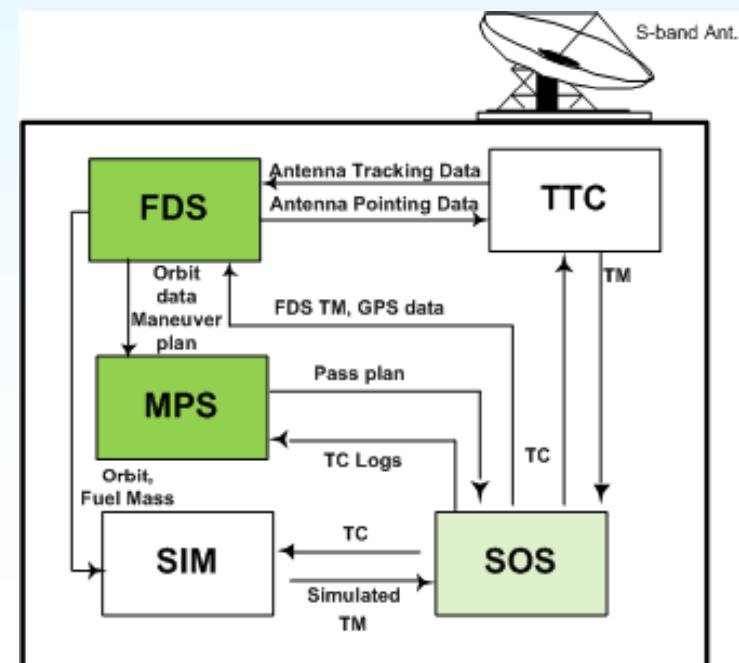

◆ Flight Dynamics Subsystem (FDS)

- Orbit determination and prediction

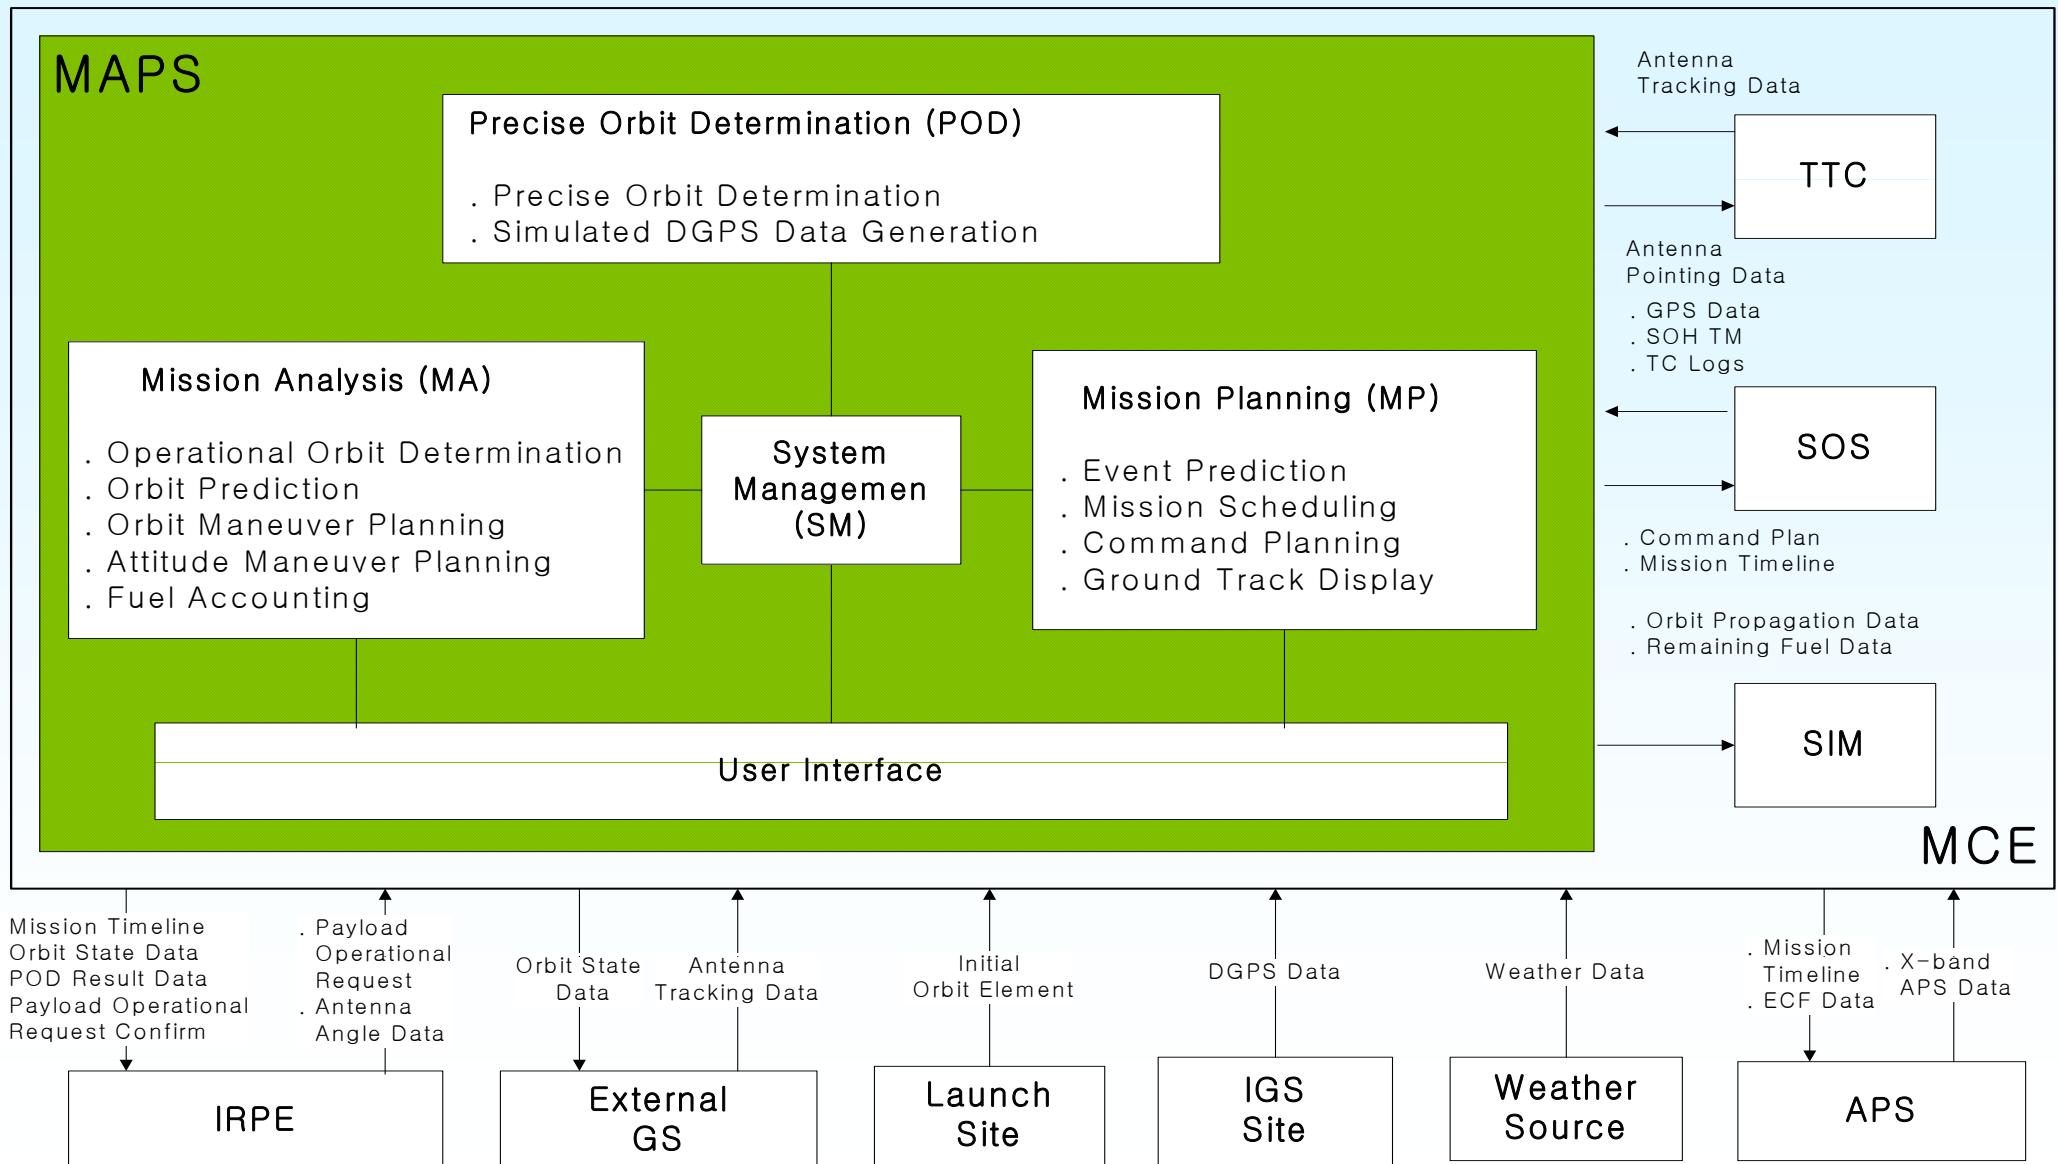

◆ Satellite Simulator Subsystem (SIM)

- Satellite Simulation
- Operator Training

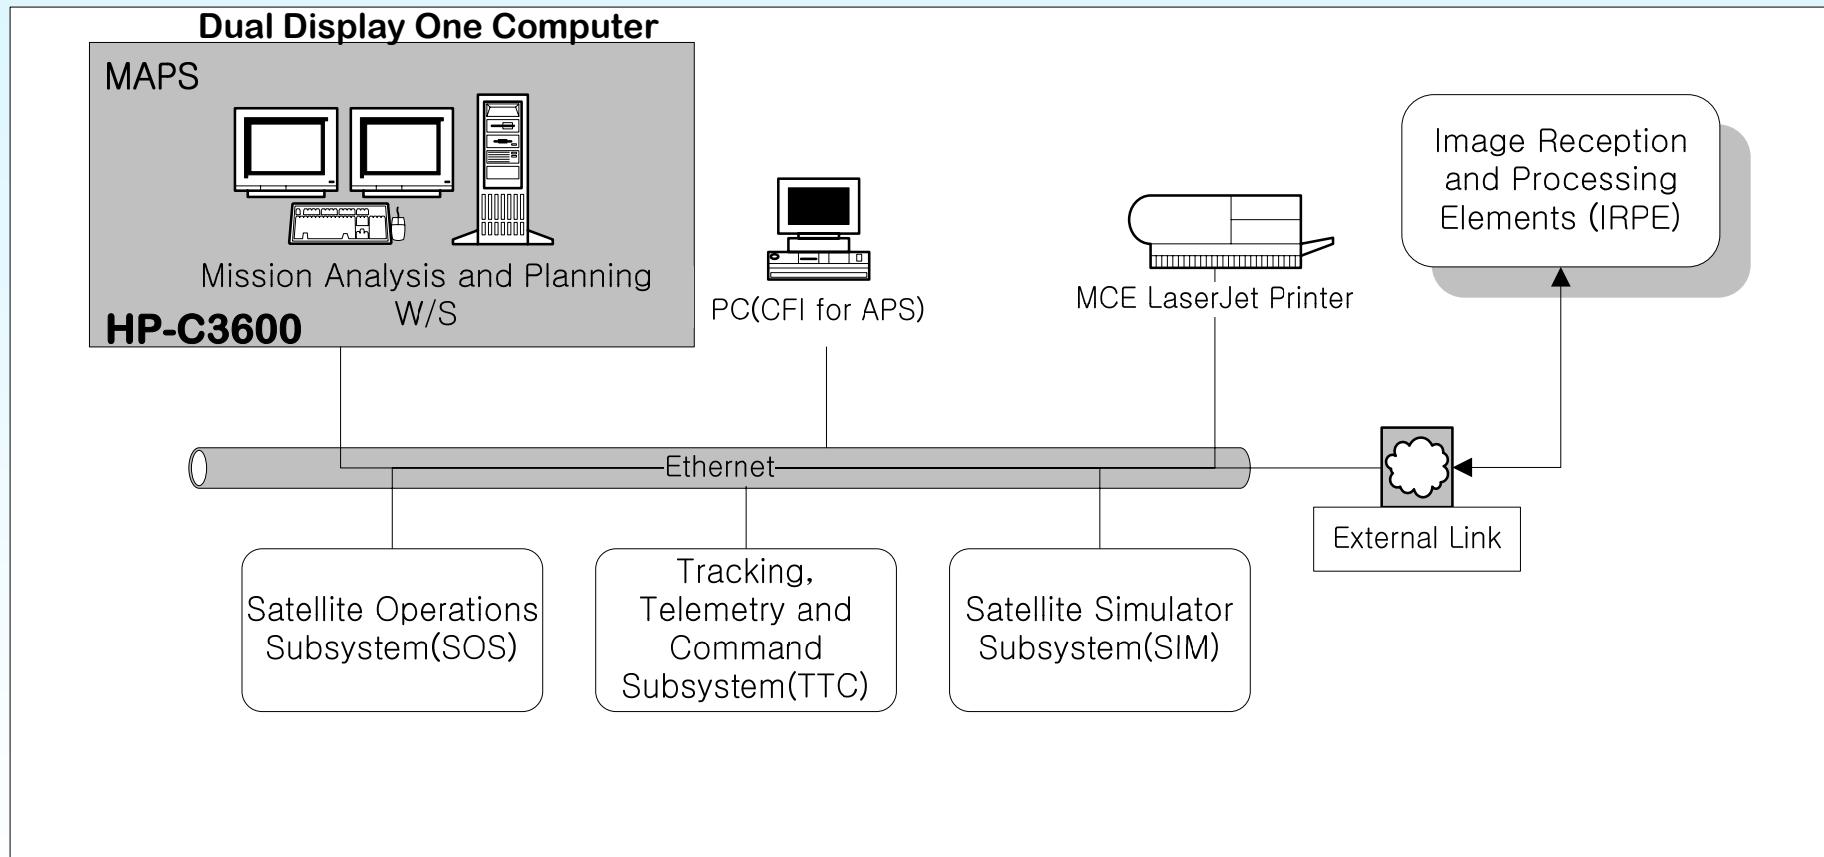

Separated to three subsystems

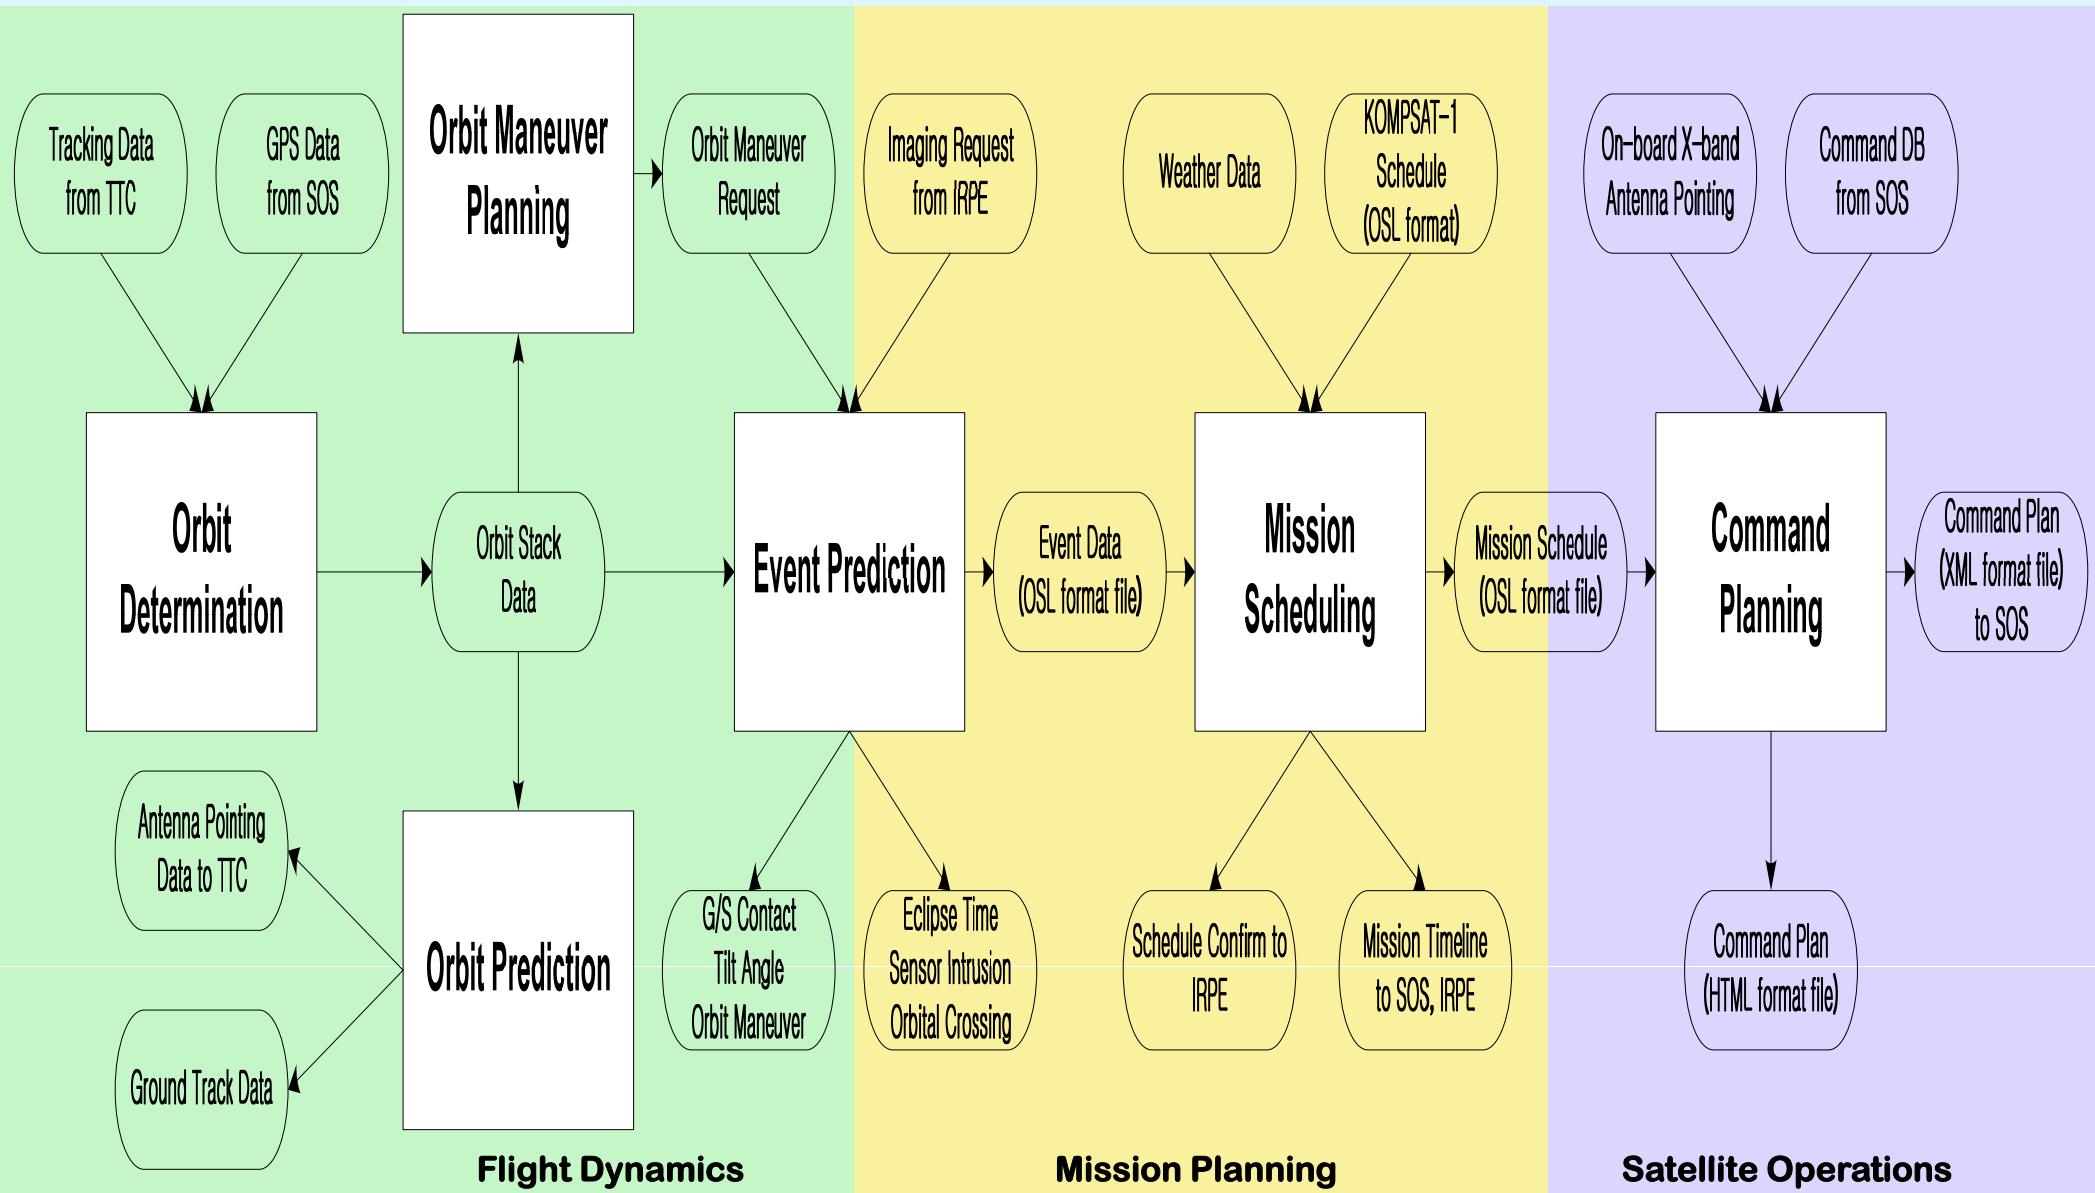

KOMPSAT-2 MAPS Functional Structure

KOMPSAT-2 MAPS Computer

Reason for Separation of MAPS Functions

- Specialties in satellite operation people – one people not for all operations
 - ◆ Flight dynamics
 - ◆ Mission planning
 - ◆ Command operations
- Intensive work required in KOMPSAT-2 mission planning due to many observations in the world – 1m resolution image
 - ◆ Inconvenient to share one MAPS computer by two operators (FD and MP)
 - ◆ One more MAPS computer installed – same functionality but different usage
- Next satellite mission
 - ◆ KOMPSAT-3 is for EO mission with agility – New functionality required
 - ◆ KOMPSAT-5 is for SAR mission - New functionality required
- Flight dynamics functions
 - ◆ general functions can be added for different satellite missions
- Mission planning functions
 - ◆ special functions should be replaced for different satellite mission
- KOMPSAT-2 MAPS functions are separated and allocated to FDS, MPS, and SOS for KOMPSAT-3 MCE and KOMPSAT-5 MCE

K-2 MAPS

K-3 MPS

K-5 MPS

FDS: Flight Dynamics Subsystem

MA: Mission Analysis

MP: Mission Planning

MPS: Mission Planning Subsystem

POD: Precision Orbit Determination

SAR: Synthetic Aperture Radar

SM: System Management

SOS: Satellite Operations Subsystem

XAPG: X-band Antenna Pointing data Generation

K-2 MAPS

K-3 FDS

K-5 FDS

Additional function
- Osculating to Mean Orbit Conversion

Additional function
- Mean Orbit Propagation

Additional function
- Semi-autonomous function for POD

Addition of Ground Track Maintenance Maneuver

Addition of Ground Track Deviation Prediction

Addition of POD by AOPOD Dual Freq GPS Raw Data

Addition of POD by SLR Data
-ILRS Site Interface

Flight Dynamics

AOPOD: Atmospheric Occultation POD

FDS: Flight Dynamics Subsystem

ILRS: International Laser Ranging Service

MA: Mission Analysis

MP: Mission Planning

MPS: Mission Planning Subsystem

POD: Precision Orbit Determination

SAR: Synthetic Aperture Radar

SM: System Management

SOS: Satellite Operations Subsystem

Development of K-3 and K-5 MCE

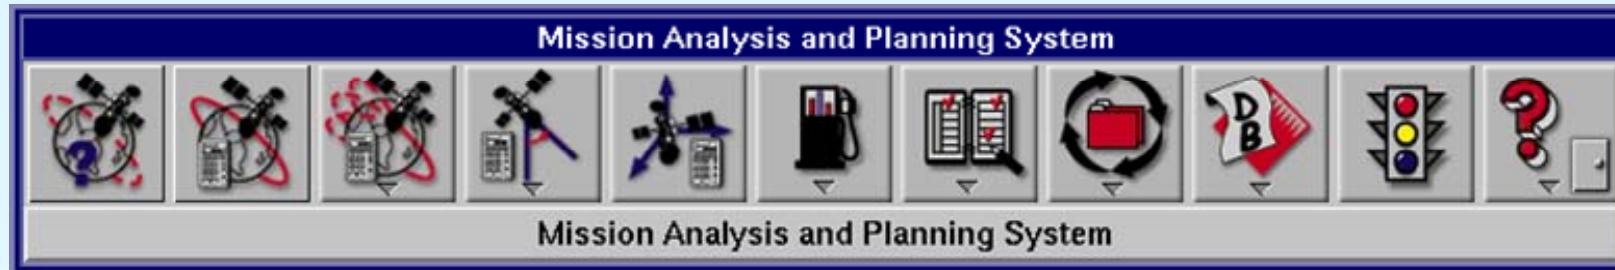

● Design Characteristics

- ◆ Objected-oriented analysis and design methodology
- ◆ Heritages from KOMPSAT-2 MCE used for risk mitigation and cost reduction
- ◆ Co-work with AIT Team to develop the core modules in commanding and telemetry system

● Development Environment

- ◆ Operating System
 - Windows (SOS, SIM) : co-work with AIT
 - Linux (MPS, FDS) : Re-use the heritage from K-2
- ◆ Language: C++ (SOS, SIM), FORTRAN, C++(MPS, FDS)
- ◆ DBMS: MS SQL Database (SOS), Binary File (SIM)
- ◆ Middleware: Microsoft .NET framework
- ◆ GUI Tool: Nokia(Trolltech) QT, Component One
- ◆ Design Tool: Star UML

KOMPSAT-1 MAPS and KOMPSAT-2 MAPS

The image shows the KOMPSAT-2 Mission Analysis and Planning System (MAPS) interface. The top navigation bar includes "OD and OP", "Orbit Maneuver", "Fuel Accounting", "Mission Planning", "Precise OD", "System", and "Utilities". On the left is a logo for "MAPS" with a satellite icon and "ETRI". The center workspace displays three icons for Orbit Determination: "OP", "OOD", and "TLEOD". Below this is a section titled "Orbit Determination". On the right side, there are two digital clocks showing "KST" and "UTC", and three buttons for "Group", "Process", and "Logout".

Conclusions

- Four Subsystems Structure Implemented for KOMPSAT-1 and KOMPSAT-2 Mission Control Element (MCE)
 - Flight dynamics, mission planning and command planning functions integrated into Mission Analysis and Planning Subsystem
- MAPS Functions Separated and Allocated to FDS, MPS, SOS for KOMPSAT-3 and KOMPSAT-5 MCE
 - For convenient operation of the subsystem by operator specialties
 - Due to different characteristics of FDS and MPS
 - FDS – general functionality satisfied for all satellite missions
 - MPS – special functionality required for each satellite mission
- Five subsystems structure is now well established for KOMPSAT and COMS satellite mission control
 - TTC, SOS, MPS, FDS, SIM for KOMPSAT Mission Control Element (MCE)
 - TTC, ROS, MPS, FDS, CSS for COMS Satellite Ground Control System (SGCS)

COMS SGCS Functional Structure
