

# Jeremy Bargaen

Jeremy Bargaen is the Chief Engineer for the Joint Polar Satellite System (JPSS) Common Ground System (CGS), which manages and routes data for multiple missions including both national and international customers, and which delivers multiple terabytes per day of environmental data products to critical users in the weather enterprise. In addition to managing the day-to-day technical oversight of the CGS, he led the transition to the latest operational block for the system which is in operations today. Jeremy has held a number of leadership roles at Raytheon Intelligence & Space, including key roles in multiple ground system programs and technologies across NASA, NOAA, DoD, and the Intelligence Community.
