

Luis Rodriguez

Luis Rodriguez currently serves as Director of Technology at AMERGINT, where he examines and implements innovative improvements and solutions for the sleek and intuitive end-user experiences of AMERGINT's versatile software-based technologies. He thrives with the challenge of taking technology to a larger audience, to be used on a much greater scale. Luis started his career as a software engineer during the burgeoning days of internet mapping and routing. Prior to joining AMERGINT, Luis was instrumental in the development and deployment of the VISA ATM locator web application and routing service for the 2000 Sydney Olympics. Luis may have dreamt of Silicon Valley early in his career, but soon discovered he much prefers the scenes and culture of Silicon Mountain in Colorado. Fascinated by both the continued growth of internet services and how they might apply to technologies surrounding satellites and communication links, Luis brings a value calibrated forward-thinking technology and research strategy to AMERGINT.
