

Working Group A Outbrief

25th Ground System Architectures Workshop Adapting Critical Operations

Starts March 1, 2021 | Special Online Series of Events

Adapting Critical Operations in an Enterprise

*Lead:
Don Sather,
The Aerospace Corporation*

March 8, 2021

OTR202100608

Session Goals

- Understand challenges and opportunities of adapting operations in a stand-alone or “stovepipe” system versus an enterprise.
 - *Why transition from stovepipes to an enterprise?*
 - *How do operations change in an enterprise versus individual stovepipes?*
 - *Where is the optimal balance of design constraints (standardization) to allow some freedom to achieve mission design optimization and still achieve enterprise goals?*
- Solicit audience participation in addressing challenges that face enterprise formation

Working Group A

Presenters/Panelists

- Dan Smith - NASA Goddard
- Lt Col Max Coberly – SMC/ECX
- Kelly Christner – Exigo Corp.
- Gerry Simon – Parsons Mission Solutions

Working Group A

Key Points

- Why transition from stovepipes to an enterprise?
 - *Situational awareness, data sharing*
 - *To avoid duplication of capability*
- How do operations change in an enterprise versus individual stovepipes?
 - *More operational commonality across missions*
 - Example: EGS Common User Experience
- Where is the optimal balance of design constraints (standardization) to allow some freedom to achieve mission design optimization and still achieve enterprise goals?
 - *Don't try to control everything at the enterprise level – that kills innovation*
 - Keep to interfaces – standardize the socket not the light bulb
- How do we change culture (e.g. gain trust/confidence)?
 - *Start small and build on success*
 - *Where possible, provide a transition path*

Working Group A

Key Points

- How do we balance stability & innovation?
 - *Avoid technical distractions – chasing “shiny, new” technology*
 - *Provide a transition path*
 - *Adopt vetted standards*
- How do we turn funding stovepipes to an enterprise that serves unique missions?
 - *Tax user programs*
 - *Use anticipated cost savings to “pay it forward”*
- What role can standards play in enterprise formation?
 - *Standards may seem restrictive but, when appropriately applied, actually fuel innovation*
 - *Increases potential participants by lowering entry barrier*
- How can we build an architecture to support change?
 - *Keeping architectural layers and interfaces “thin”*
 - *Use successful (widely adopted) standards that have been vetted with industry*
- How do we integrate external entities into an enterprise?
 - *Building to standard interfaces within the enterprise helps external organizations integrate*

Working Group A

Conclusions

- Enterprises are not always a good fit for all organizations
 - *Need to define scope of enterprise and what benefits the organization hopes to get by forming an enterprise*
- Need to architect and plan for change
- Operations can be harmonized in an enterprise to reduce duplication of capability
- One of the biggest advantages of an enterprise can be situational awareness across the enterprise by exposing/sharing data
- Adoption of vetted standards, initially seems restrictive, but actually fuels innovation
- To foster innovation, enterprises should focus on interface standards
 - *“Standardize the socket, not the light bulb”*
