

***25th Ground System Architectures Workshop
Adapting Critical Operations***

Starts March 1, 2021 | Special Online Series of Events

***State-of-the-Practice for
Digital Engineering
Transformations in Space
Mission Ground Systems***

***Leads:
Theresa Beech,
NASA Goddard Space Flight Center
and Mark McKelvin,
The Aerospace Corporation***

March 10, 2021

© 2021 The Aerospace Corporation

OTR202100613

Session Goals

- Collect a set of best practices for leveraging digital engineering to improve decision making on ground system architectures
- Key Questions:
 - *What is the state-of-practice in your organization?*
 - *What is the scope of use in your organization?*
 - *What are major challenges to adoption and application? How are these challenges addressed?*
 - *What are effective and ineffective practices to enable a digital transformation?*

Working Group F

Session Goals

Context: Enabling Digital Transformation

- An integrated digital approach that uses authoritative sources of system data and models as a continuum across disciplines to support life cycle activities from concept through disposal [DoD DE Strategy, 2018].

Use models to inform decision making

Provide an authoritative source of truth

Leverage innovative technologies to improve practice

Develop and use infrastructure, environments, tools for communication and collaboration

Provide training to transform organizational culture and workforce

Working Group F

Presenters/Panelists

- Presenters

- *Theresa Beech, NASA Goddard Space Flight Center, “Working Group F Case Study: GMSEC Model-Based Systems Engineering (MBSE) and Ground Systems”*
- *Slides in Appendix A*

Working Group F

Key Points

Use models to inform decision making

Challenges	Practices
<ul style="list-style-type: none">• Providing views of a model for stakeholder consumption instead of complete model details	<ul style="list-style-type: none">• Adopt model-view-controller pattern where views are projected from the model to meet stakeholder needs

Leverage innovative technologies to improve practice

Challenges	Practices
<ul style="list-style-type: none">• Lack of understanding for what the new technologies are (e.g. DevSecOps, agile)	<ul style="list-style-type: none">• Provide training to improve awareness and understanding of new technologies

Provide an authoritative source of truth

Challenges	Practices
<ul style="list-style-type: none">• Existence and use of an authoritative source of truth (ASOT) is counter to organizational culture• Lack of understanding for what constitutes an ASOT	<ul style="list-style-type: none">• Help organizations identify the set of data that they cannot live without• Provide data store with common access across stakeholders

Working Group F

Key Points

Use of infrastructure, environments, tools for communication and collaboration

Challenges	Practices
<ul style="list-style-type: none">• Automation stability requires effort• Tool interoperability• Vendor tool lock-in• Cost of vendor tools• Identifying a multi-functional tool that does everything• Language specification standards are implemented differently across tool vendors• Tool usage is incompatible with organization processes	<ul style="list-style-type: none">• Provide opportunities for team members with less experience to use tools• Reduce need for tool interoperability by using less tools• Follow tool interoperability standards• Have tools that are capable of interoperability (e.g. plugins to other tools or by default)• Implement tool transformations• Try tools in expected operating environment before committing

Transform organizational culture and workforce

Challenges	Practices
<ul style="list-style-type: none">• Learning curve on new approaches to leverage technologies• Effort and time to train• Ineffective documentation for training• Conducting current work while adopting new technologies	<ul style="list-style-type: none">• Provision the time to do the training• Create documentation that meets needs of developers and external stakeholder needs• Express the value of change in terms of what stakeholders care about• Develop process improvement plans along with engineering plans• Implement transformation incrementally• Influence the right people

Working Group F

Conclusions

- Challenges to adopt and use tools continue to dominate discussions around digital transformation in ground systems
- Transformation of organizational culture still has considerable challenges, but there are practices that are considered which could assist progress
- Observed less on improving decision making relative to improving traceability of information and access to relevant information

Working Group F

Appendix A: GMSEC Case Study Presentation

SOFTWARE ENGINEERING DIVISION

Working Group F Case Study: GMSEC Model-Based Systems Engineering (MBSE) and Ground Systems

What is GMSEC (Goddard Mission Services Evolution Center)?

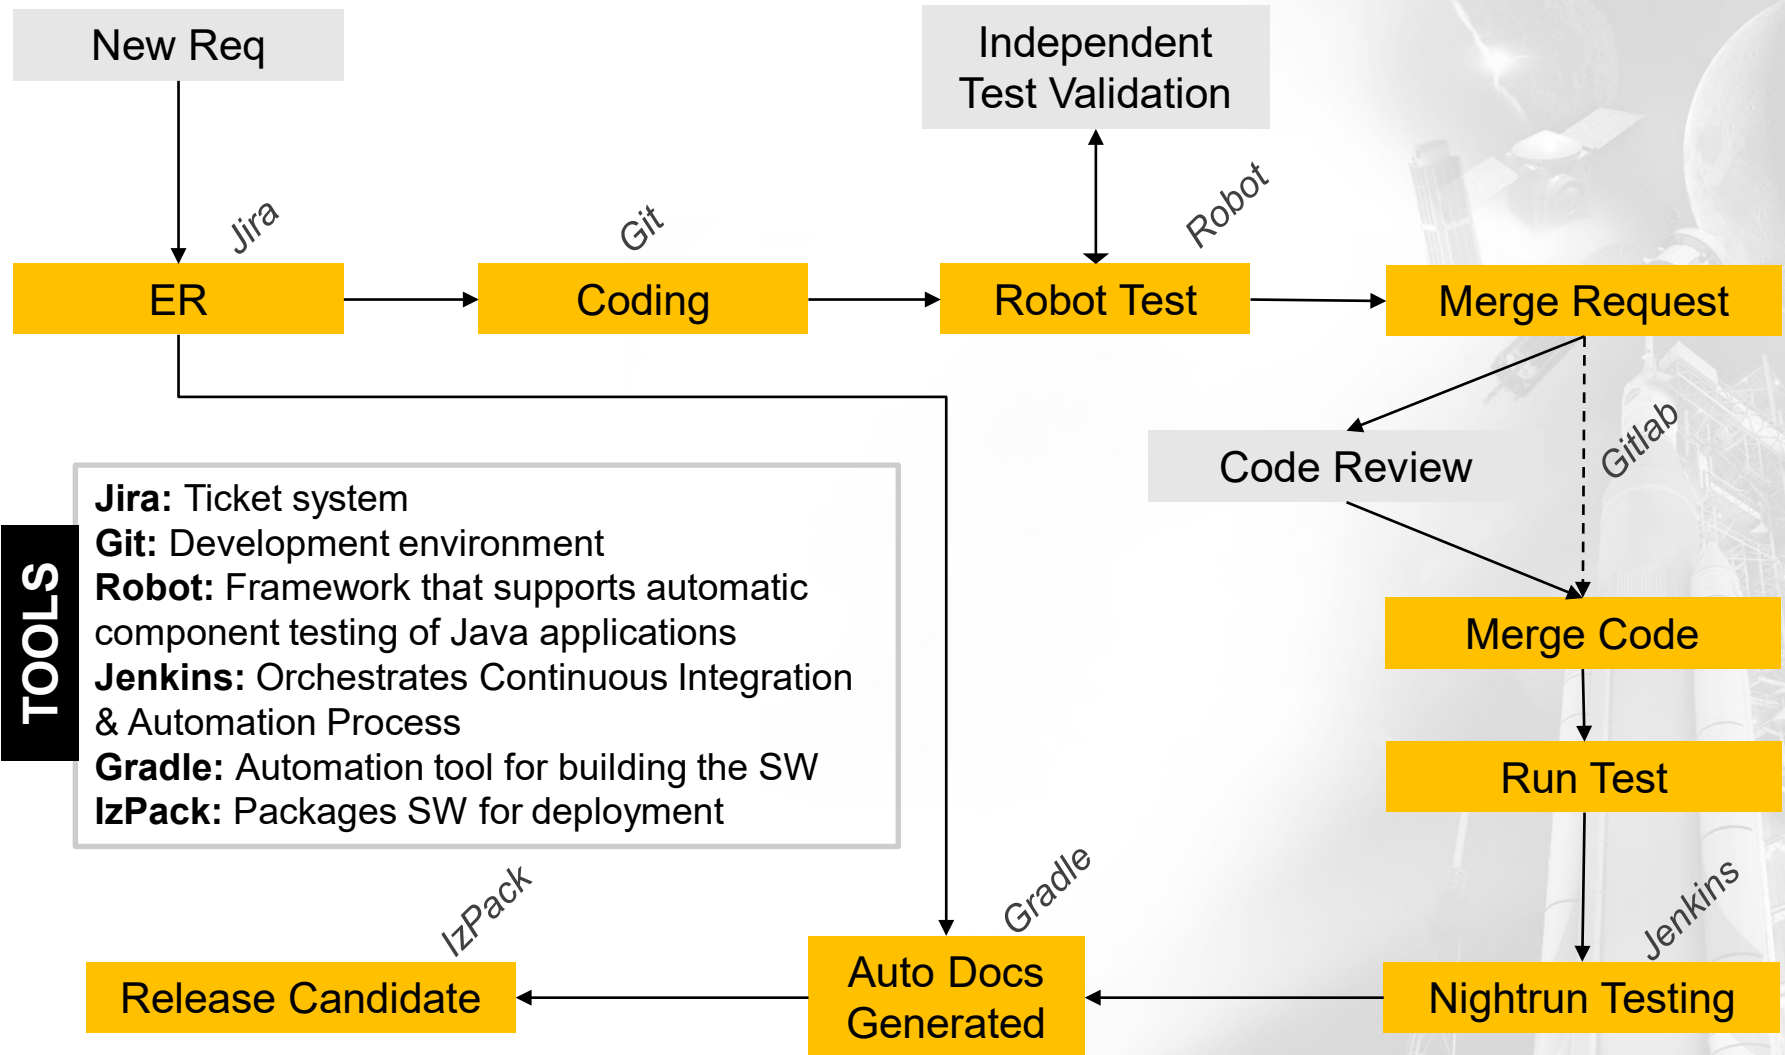

GMSEC & Model Based Systems Engineering (MBSE)

- **What do we mean by MBSE?**
 - **S = Systems, not software (SW) specifically**
 - **How do we use MBSE?**
 - **A methodology to help us develop Ground System (G/S) SW which meets the NASA process reqs (NPR)**
 - **Major axes:**
 - **Coding**
 - **Testing**
 - **Tracing**
 - **Document generation**
 - **Requirements (reqs)**
 - **Design**
- Automate, automate, automate...*
- Pick tools well...*
- Communicate, communicate, communicate...*

Name: GEDAT.GEDAT T0001

Status: 9 critical test, 9 passed, 0 failed
9 test total, 9 passed, 0 failed

Documentation: Objective:

- Tests the tree-table display of expired heartbeats.
- Tests timing settings of the heartbeat monitor.
- Tests auto expansion of error nodes.

Requirements: 3.1.2.17, 3.1.2.18, 3.1.3.1, 3.1.3.2, 3.1.4.1.1, 3.1.4.1.2, 3.1.4.2.1, 3.8.2

Start / End Time: 20200608 02:51:31.771 / 20200608 02:52:24.626

Elapsed Time: 00:00:52.855

Automated Document Generation: VDD & readme

What about Design & Requirements? 2 Approaches started with 2 Pilot Projects

- **THE TRIGGER: Design ↔ Requirements ↔ Code**
 - QA audit non-compliance
- **Team discussions**
 - Can we ignore this? What do we want to do? From nothing to ...??
 - How to make it useful for us? Old vs. new developments
 - How to minimize the “check the box” cost?
 - Heated discussions with SW Process Improvement team listening in
 - Informal briefings to eng mgmt

- **Approach decided upon:**

- **Two pilot projects:**
 - MagicDraw
 - plantUML

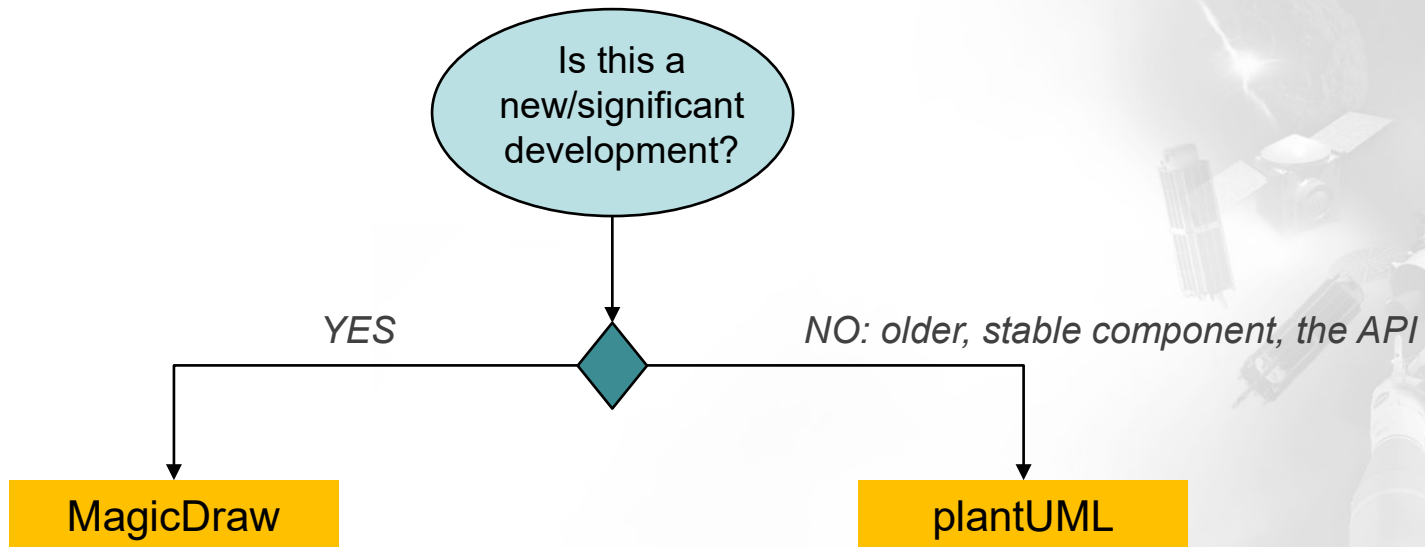

I want to write more documentation.... Really!!!

...said no engineer ever....

Result: Going Forward w/Both Approaches

• Decision Factors

- ✓ Developer buy-in
- ✓ Sustainability:
 - Ease of use, few tools increase adherence to process
 - Must not be burdensome for developers or a drag on productivity
- ✓ Usefulness (based on software stage and life cycle)
- ✓ Satisfy QA requirements

Requirements: Always in MagicDraw

Everything starts with the requirements which are stored in MagicDraw....

GSS

GSS Software Requirements Specification
Document
Revision: 3.0

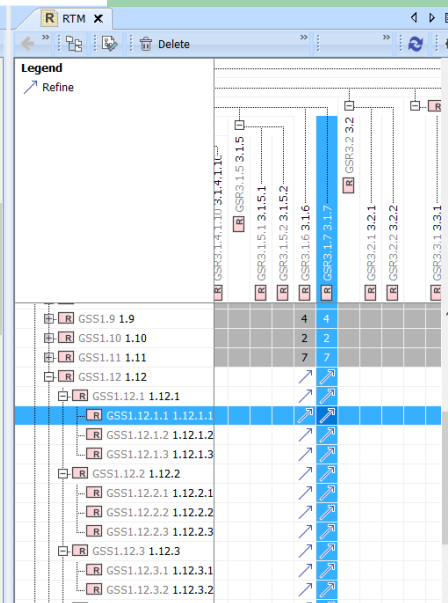

- 1.3.5.2. The GSS Chart Widget shall allow the user to limit the number of points displayed in the plot area of the chart by a time span in hours and minutes.
- 1.3.5.3. When the limit is reached, the GSS Chart Widget shall drop the oldest point from the display of the chart.
- 1.3.6. The GSS Chart Widget shall allow the user to clear the plot area of the chart.
- 1.4. The GSS shall provide the user with a Countdown Clock widget.
 - 1.4.1. The GSS Countdown Clock widget shall display the current time.
 - 1.4.2. The GSS Countdown Clock widget shall allow the user to customize the clock format and time zone.
 - 1.4.3. The GSS Countdown Clock widget shall display the time left until the beginning of an event.
 - 1.4.4. The GSS Countdown Clock widget shall provide the user with two different views:
 - 1.4.4.1. The Next Pass View shall display countdowns to the nearest future event in multiple groups.
 - 1.4.4.2. The Event Countdown View shall display all known upcoming events ordered by event start times.
 - 1.4.5. The GSS Countdown Clock widget shall allow the user to choose which columns are displayed in the event list.
- 1.4.5.1. The
- 1.4.6. The GSS C

Requirements are housed in
MagicDraw for both approaches

System requirements are traced to components

1.4.6.1. The particular

#	Name	Text
95	GSS1.12.1.12	The GSS user interface shall have the following structure:
96	GSS1.12.1.1.12.1	The GSS shall have a login page
97	GSS1.12.1.1.1.12.1.1	The login page shall initially display no username
98	GSS1.12.1.2.1.12.1.2	The login page shall not be accessible by a logged in user
99	GSS1.12.1.3.1.12.1.3	The login page shall navigate to the home page
100	GSS1.12.2.1.12.2	The GSS shall have a home page
101	GSS1.12.2.1.1.12.2.1	Before logging in, the home page shall display a login dialog
102	GSS1.12.2.2.1.12.2.2	After logging in, the home page shall display the username
103	GSS1.12.2.3.1.12.2.3	After logging in, the home page shall display the dashboard menu
104	GSS1.12.3.1.12.3	The GSS Support menu:
105	GSS1.12.3.1.1.12.3.1	Shall navigate to the Installation Guide page
106	GSS1.12.3.2.1.12.3.2	Shall navigate to the User Guide page
107	GSS1.12.4.1.12.4	The GSS Administration menu:
108	GSS1.12.4.1.1.12.4.1	Shall load user management
109	GSS1.12.4.2.1.12.4.2	Shall navigate to the metrics page
110	GSS1.12.4.3.1.12.4.3	Shall navigate to the health page
111	GSS1.12.4.4.1.12.4.4	Shall navigate to the logs page
112	GSS1.12.4.5.1.12.4.5	Shall navigate to the API page
113	GSS1.12.5.1.12.5	The GSS Account menu:
114	GSS1.12.5.1.1.12.5.1	Shall navigate to the settings page

#	Name	Text
1	GSR3.3	General Requirements
2	GSR3.1.3.1	Functional Requirements
3	GSR3.1.1.3.1.1	GMSEC System shall enable inter-application communication
6	GSR3.1.2.3.1.2	GMSEC System shall enable inter-application communication among two or more GMSEC implementations
7	GSR3.1.3.3.1.3	GMSEC System shall provide an API that normalizes common message-oriented middleware interfaces
15	GSR3.1.4.3.1.4	GMSEC System shall define capabilities of compliant GMSEC components
16	GSR3.1.4.1.3.1.4.1	GMSEC System components shall adhere to standardized message formats as defined in OMG C2MS
17	GSR3.1.4.1.1.3.1.4.1.1	GMSEC System component categories shall include: telemetry and command
18	GSR3.1.4.1.2.3.1.4.1.2	archive
19	GSR3.1.4.1.3.3.1.4.1.3	monitoring
20	GSR3.1.4.1.4.3.1.4.1.4	situational awareness
21	GSR3.1.4.1.5.3.1.4.1.5	alerting/notification
22	GSR3.1.4.1.6.3.1.4.1.6	analysis and trending
23	GSR3.1.4.1.7.3.1.4.1.7	automation
24	GSR3.1.4.1.8.3.1.4.1.8	testing/validation
25	GSR3.1.4.1.9.3.1.4.1.9	GMSEC System components shall adhere to messages defined for each category of component
26	GSR3.1.4.1.10.3.1.4.1.10	GMSEC System shall adhere to message interactions for each defined category of component
27	GSR3.1.5.3.1.5	GMSEC System shall verify compliance of GMSEC components
30	GSR3.1.6.3.1.6	GMSEC System shall provide middleware access via a web-server/browser architecture.

Testing and Tracing in MagicDraw

Requirements are traced to tests...

The screenshot displays the MagicDraw interface with a requirements tree on the left, a central requirements matrix, and a detailed test table on the right. The test table shows the following data:

Req ID	Description	Test ID	Test Description
GSS 1.4.4.2	The Event Countdown View shall display all known upcoming events ordered by event start times.	GSR 3.1.4.1.3	Tests:Portal::End to end (JavaScript) tests:dashboard::countdown::countdown.spec.js::should be able to remain on event
GSS 1.4.5	The GSS Countdown Clock widget shall allow the user to choose which columns are displayed in the event list.	GSR 3.1.4.1.3	Tests:Portal::End to end (JavaScript) tests:dashboard::countdown::countdown.spec.js::should be able to switch to event
GSS 1.4.5.1	The GSS Countdown Clock widget shall allow the user to rename the columns.	GSR 3.1.4.1.3	Tests:Portal::End to end (JavaScript) tests:dashboard::countdown::countdown.spec.js::should be able to open the co
GSS 1.4.6	The GSS Countdown Clock widget shall allow the user to group events by a particular field.	GSR 3.1.4.1.3	Tests:Portal::End to end (JavaScript) tests:dashboard::countdown::countdown.spec.js::should be able to pop open th
GSS 1.4.6.1	The GSS Countdown Clock widget shall allow the user to assign groups a particular color for visual effect.	GSR 3.1.4.1.3	Tests:Portal::End to end (JavaScript) tests:dashboard::countdown::countdown.spec.js::should be able to pop open the co
GSS 1.4.7	The GSS Countdown Clock widget shall keep track of events for use by its other functions.	GSR 3.1.4.1.3	Tests:Portal::Java unit tests:web:rest::CountdownEventsResourceIntTest.java::checkUidsRequired
GSS 1.4.7.1	The GSS Countdown Clock widget shall allow the user to add events by creating a custom event.	GSR 3.1.4.1.3	Tests:Portal::Java unit tests:web:rest::CountdownEventsResourceIntTest.java::createCountdownEvents

Software Design Document for the GMSEC System Agent (SA)

Goddard Mission Services Evolution Center (GMSEC) Software Engineering Division (code S80), GSFC, NASA – Version 1.0, 2021-03-02 | A GMSEC component for interacting with the host computer.

This document is controlled by the GMSEC Product Development Team. Proposed changes to this document should be submitted to the development team lead at gmsec-support@lists.nasa.gov along with change request justification.

1. Introduction

This document details the Software Design for the GMSEC SA Software, Version 4.3.1, released on 2021-03-02.

2. Purpose

SA is part of the GMSEC native software library, maintained for the use of software developers and engineers who manufacture ground system equipment for mission operations centers, satellite uplink/downlink facilities, launch vehicle test-and-integration systems, and other ground system facilities.

3. Key Decisions and Rationale

SDD template w/component name & version, API version

- 1) Developer instruments code w/reqs
- 2) Java classes scanned for Java annotation w/reqs
- 3) Scan complete => bidirectional traceability
- 4) plantUML file is generated for each class
- 5) plantUML tool converts plantUML files => class diagrams
- 6) SDD template + traceability tables + images => 1 doc
- 7) asciidoctor converts doc to HTML

5. Requirements-to-Design Traceability

Table 1. Table Requirements to Class Mapping

Requirements	Class
3.1	SystemAgent
3.1.1	SystemAgent
3.1.1.1	SystemAgent
3.1.1.2	SystemAgent
3.1.1.3	SystemAgent
3.1.1.4	SystemAgent
3.1.1.5	SystemAgent
3.1.1.6	SystemAgent
3.1.1.7	SystemAgent
3.1.1.8	SystemAgent
3.1.1.9	SystemAgent
3.1.1.10	SystemAgent
3.1.1.11	SystemAgent
3.1.1.12	SystemAgent
3.1.1.13	SystemAgent

6. Design-to-Requirements Traceability

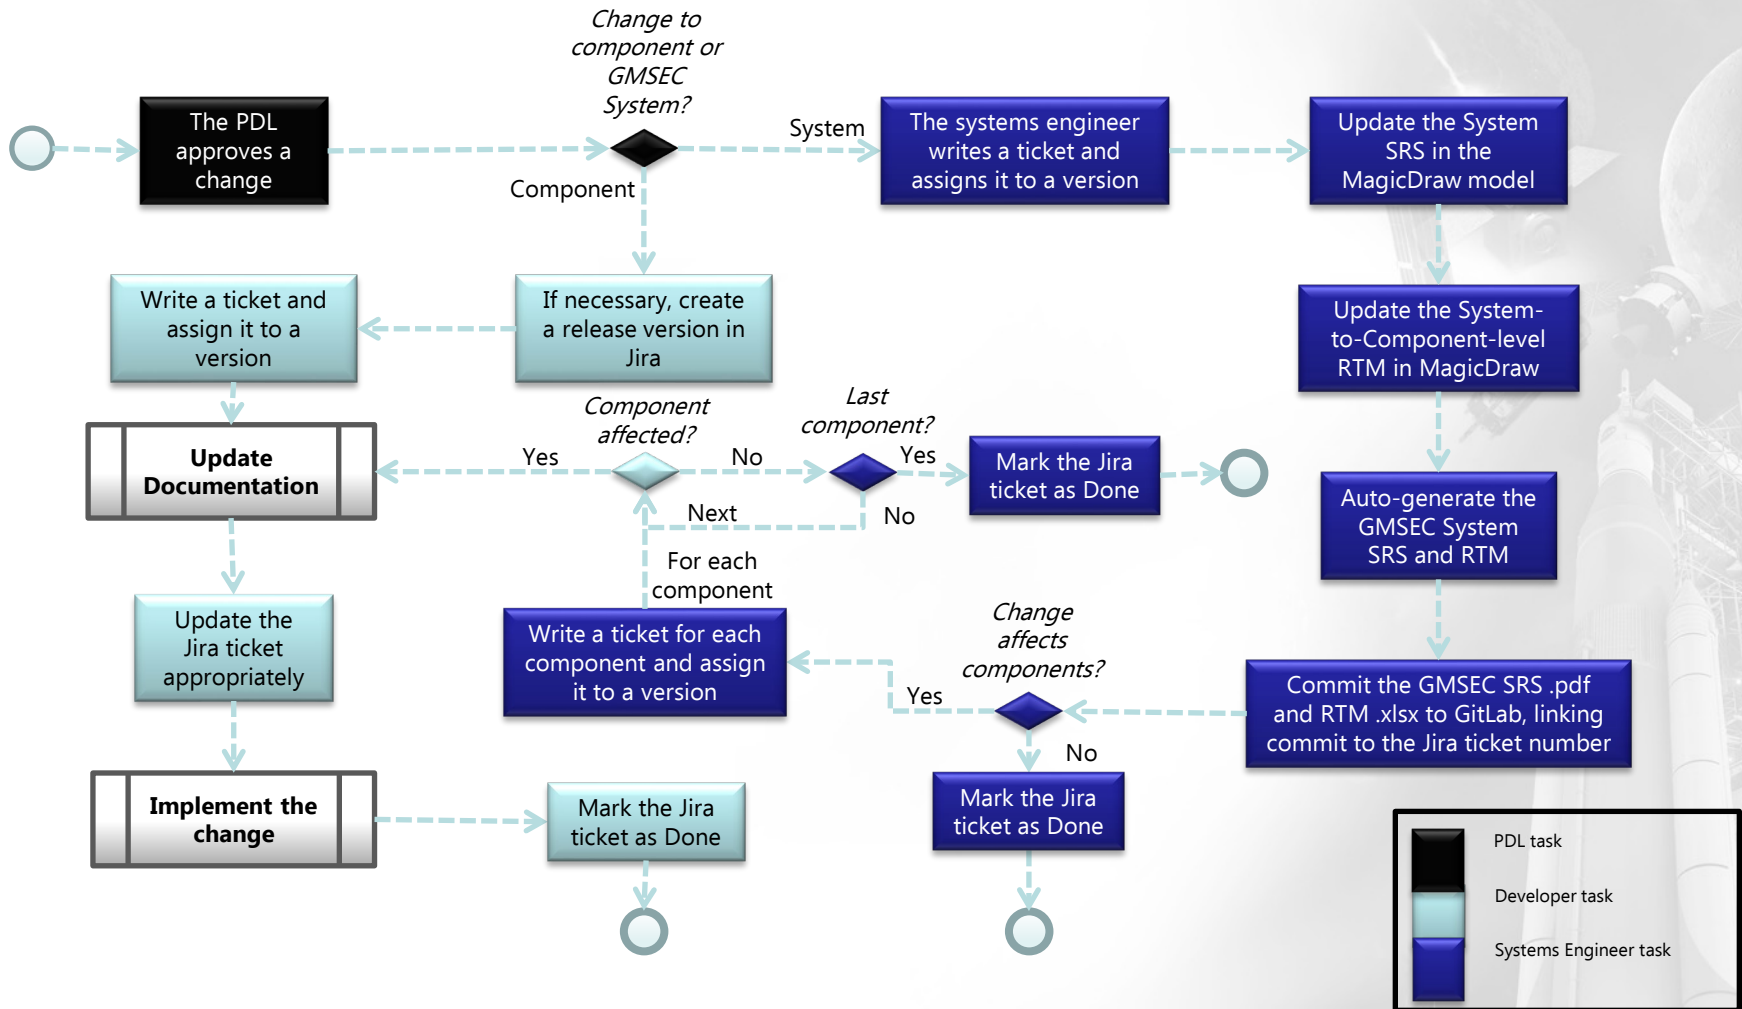

Table 2. Table Class to Requirements Mapping

Class	Requirements
AppHeartbeatTask	3.8, 3.8.1
C2CXMessageHandler	3.9, 3.9.1, 3.9.2, 3.9.3, 3.9.4, 3.9.5, 3.9.6, 3.9.7
ComponentHeartbeatTask	3.3
DefaultPublisher	3.2.1, 3.2.2, 3.2.3, 3.2.4, 3.2.5, 3.2.6, 3.2.7, 3.2.8, 3.2.9, 3.2.10, 3.6.2.1, 3.6.2.2, 3.6.2.3, 3.6.2.4, 3.6.2.5, 3.6.2.6, 3.6.2.7, 3.6.2.8
DirectiveCommandTask	3.4.1, 3.4.1.1, 3.4.1.2, 3.4.1.3
DirectiveMessageHandler	3.4
LogMsg	3.6.2.4, 3.6.2.5, 3.6.2.7, 3.6.2.8
LogReaderFactory	3.6.2.3
LogTask	3.6, 3.6.1, 3.6.2
MiddlewareHeartbeatTask	3.7
ResourceTask	3.2, 3.2.11
SystemAgent	3.1, 3.1.1, 3.1.1.1, 3.1.1.2, 3.1.1.3, 3.1.1.4, 3.1.1.5, 3.1.1.6, 3.1.1.7, 3.1.1.8, 3.1.1.9, 3.1.1.10, 3.1.1.11, 3.1.1.12, 3.1.1.13, 3.1.1.14, 3.1.1.15, 3.5

Appendix B: Collected Data

	Challenges/Mitigations	Effective/Ineffective Practices
Use of Models for Decision making	<ul style="list-style-type: none"> * getting something out of a model for stakeholders to review * accessibility to reviewers as opposed to authors of the model 	<ul style="list-style-type: none"> * take an approach to generate views or projections that capture what the reviewer are interested in instead of the entire details of the model
Provide ASOT	<ul style="list-style-type: none"> * The basic concept of having an ASOT is very foreign (and counter to some organizational cultures) and they are still debating how 	<ul style="list-style-type: none"> * provide data store with common access across stakeholders * What data can your program not live without? Present this question to
Leverage innovative technologies to improve practice	<ul style="list-style-type: none"> * understanding the new approaches e.g. devsecops, agile, due to resistance 	<ul style="list-style-type: none"> * training on usage, increase awareness

Appendix B: Collected Data

	Challenges/Mitigations	Effective/Ineffective Practices
<p>Infrastructure, env, tools for communication and collaboration</p>	<ul style="list-style-type: none"> * effort to make automation stable * effort from automated to not-automated * getting tools to talk to one another * tool lock in * cost of tools, what about cost to NOT doing things? * finding a tool to do everything is problematic * standards are not really standards, there is ambiguity present and the degree of standardization needs clarification * contracts might constrain use of tools that may not work out * tools and processes not working well together 	<ul style="list-style-type: none"> * provide hands on use of tools by sr members of team rather than let jr people do the work with tools * use less number of tools as possible * use requirements tool for allocation, derivation, tracing etc. then when need to pull into modeling tool * how to manage tool lock in? * standardization - tools should follow industry standards for tool interoperability * having tools that are capable of multiple functions as opposed to tools that do not interoperate by default

Appendix B: Collected Data

	Challenges/Mitigations	Effective/Ineffective Practices
provide training and transform culture and workforce	<ul style="list-style-type: none"> * training new people to learn the technologies and it takes time and effort; learning curve; (mitigations) just do the training; documentation for training is not effective - just go read the spec; * conduct current work while changing technology 	<ul style="list-style-type: none"> * create docs for the developers, not just docs needed as part of deliverables - essentially need to meet developers' needs and external needs. * express value of change in terms of what the stakeholder cares about * tool transformations * process improvement plans and engineering plans with relationships to bring people along as opposed to do it all at once * try out tools first, to see if they work as you expect them to within your environment before committing. * identify key people to convince (influence the right people)
OTHER	<ul style="list-style-type: none"> * Scaling from small teams/numbers to larger scale * people, human/organizational aspects * processes more difficult than tools * complicated interplay between tools, processes, environment (constraints)
