

Mauro Pecchioli

Mauro Pecchioli is the Head of the Multi-Mission Infrastructure Programme at the Operations Centre of the European Space Agency (ESA / ESOC) in Darmstadt, Germany.

He has got more than 35 years of professional experience in the mission operations domain. As an Aerospace engineer Mauro was initially involved in tasks related to the design, preparation and execution of spacecraft operations with various degrees of responsibility. He managed and executed critical as well as routine operations of a variety of satellites. In the second half of his career he progressively shifted the focus of his professional activities towards Engineering and more specifically on the definition and production of mission operations data systems. In particular, he has led the specification and production of the last two generations of mission control systems infrastructure at ESOC. He is currently managing an ambitious Program of the European Space Agency aiming at the 'Enterprise level' integration of ground systems ready to provide operational support to multiple missions of different categories.
