

Victor Rohr
Senior Project Engineer
The Aerospace Corporation

Mr. Victor Rohr is a Senior Project Engineer with the Aerospace Corporation, having joined the Aerospace team in 2003 after a 21-year career in the United States Navy. During the last 12 years of his Navy career, Mr. Rohr served as the Information Systems Director for a US Navy Command and was responsible for database architecting, software development and numerous technical and programmatic responsibilities. Within the Aerospace Corporation, he has held several positions spanning highly technical and programmatic roles. It was during his recent assignments where he and others identified critical impediments toward the realization of a cohesive means for integrating and retaining evolving knowledge and understanding. The need for a path toward resolution led to three Aerospace reports and his recognition as a leader in the drive for DoD and IC-wide semantic consistency.
